

EMS-Project presentation figures — contact sheet

F01.01 [main] — 01_dataset

Dataset overview: subjects, stimuli, official folds

F01.02 [main] — 01_dataset

Gaze signatures: subject-level distributions + scanpaths

F02.01 [main] — 02_features

The 45 hand-crafted features: groups + examples

F02.02 [main] — 02_features

HC-SZ effect sizes for all 45 features + rainclouds + category profiles

F03.01 [main] — 03_methodology

Architecture diagram (matches model.py)

Learned Stimulus-Conditioned Normative Modeling — architecture (shapes and formulas exactly as in src/proposal/model.py)

F03.02 [main] — 03_methodology

Evaluation protocols P1 / P2 / official test

Evaluation protocols (as implemented in src/data/common.py, src/proposal/train.py, src/test_model/eval.py)

F04.01 [main] — 04_ablations

Learned vs hard normative deviation

F04.02 [main] — 04_ablations

Hard-deviation chain: diff -> z -> mahal

F04.03 [main] — 04_ablations

Learned comparator vs fixed latent subtraction

F04.04 [main] — 04_ablations

Stimulus pooling: attention vs mean vs deepset

F04.05 [main] — 04_ablations

HC concentration regularization lambda_norm

F04.06 [supp] — 04_ablations

Stimulus budget sensitivity K=25/50/100

F05.01 [main] — 05_latent_distribution

Learned latent space vs the HC normative bank (PCA + heatmap + lambda diagnostics)

F06.01 [main] — 06_importance_xai

Feature + stimulus importance (permutation, attention, leave-one-out)
